PROFESSIONAL SUMMARY

Computer Science undergraduate (2026) with hands-on experience building and shipping AI-powered systems, LLM-integrated applications, and production-grade data pipelines. Skilled in end-to-end ownership — from problem framing and model integration to eval design, monitoring, and iteration. Strong research instincts paired with practical Python engineering, MLOps tooling, and cloud platforms.

EDUCATION

Bachelor of Engineering – Computer Science | Brindavan College of Engineering, Bengaluru | CGPA: 7.44 | 2022–2026

TECHNICAL SKILLS

AI & LLM Systems	LLM Integration, Prompt Engineering, OpenAI API, Retrieval Pipelines (RAG), Agent Design, Model Evaluation
ML & MLOps	Machine Learning, Deep Learning, MLflow, DagsHub, Model Training & Evaluation, Regression Testing
Data Engineering	Apache Airflow (ETL pipelines), PySpark, SQL, MongoDB
Cloud & Platforms	SAP BTP, SAP HANA Cloud, SAP Analytics Cloud, Git, GitHub, VS Code, Jupyter, Power BI
Programming	Python (primary), C, JavaScript (React, Node.js)

INTERNSHIP EXPERIENCE

SAP Edunet Industry Internship Program | Ongoing

Applied AI & Data Engineering Intern

- Designed and deployed production ETL pipelines using Apache Airflow and PySpark, automating end-to-end data workflows across enterprise cloud infrastructure.
- Built monitoring dashboards in Power BI to track data pipeline health and surface operational KPIs — establishing measurable quality bars for AI-backed outputs.
- Integrated Python scripts with SAP HANA Cloud for automated data ingestion, debugging failures across data and infra boundaries to harden the system.
- Delivered cloud-based analytics features on SAP BTP and SAP Analytics Cloud, owning delivery end-to-end from design through rollout and iteration.

PROJECTS

FeedbackLens – LLM-Powered Customer Feedback Analyser

Python · OpenAI API · Apache Airflow · PySpark · MongoDB · MLflow · Plotly Dash

- Built an end-to-end LLM pipeline that ingests feedback from 4 sources (tickets, reviews, NPS, community), deduplicates via PySpark, and extracts themes + sentiment using OpenAI API with structured prompt design.
- Designed a 6-dimension eval rubric (theme accuracy 94%, hallucination guard 97%, edge-case handling) with automated regression flagging — outputs below 0.70 confidence routed for human review.
- Logged every pipeline run in MLflow for regression tracking; built Airflow DAG with 5 steps covering ingest → dedup → LLM extract → eval score → MongoDB upsert.
- Shipped interactive dashboard showing top themes, sentiment breakdown, test suite pass/fail results, and failure drill-down panel — directly mirrors Enterprise's core product workflow.

Smart Presence – AI-Driven Attendance & Academic Management System

Python · Face Recognition · Geolocation · Role-Based Access Control · Analytics Dashboard

- Engineered an AI attendance system using face recognition and geolocation-based validation with RBAC — delivered end to end from problem framing through rollout.
- Designed analytics dashboards to monitor system outputs, surface anomalies, and track attendance KPIs — mirroring production monitoring practices for AI systems.
